Skills, knowledge, attributes and abilities

E-Business Technology Skills

We have developed a wide range of skills to support the design of primarily Internet based e-business systems, from e-commerce websites to software optimising business processes. This includes the ITrack system developed for Schlumberger, which provided additional support for the inspection activities, providing real time feedback with regards to yield and lead times, and monitoring times taken to perform inspection activities, therefore optimising performance.

Graphic Design

Studio Arctic Wolf has a strong personal interest in design and have developed a vast number of skills promoting effective communication through different media, from print designs to application interfaces, using industry standard software including Adobe Photoshop and Adobe Illustrator.

Programming Skills

Studio Arctic Wolf has acquired the knowledge and skills to develop backend systems to support multimedia and e-business applications. This includes intensive designing, developing, testing and debugging of code in a range of languages from PHP websites with backend MySQL to JSP websites with Oracle SQL databases.

3D Skills

Through the use of industry standard software, including 3D Studio Max, Studio Arctic Wolf have enthusiastically developed strong 3D skills for a wide range of different media. This includes static 3D photos, interactive 3D applications and 3D movies.
